This manual is one of a series of manuals for aviation and ground personnel who perform helicopter sling load missions ashore or aboard ship. These manuals are a coordinated effort of the US Army, US Marine Corps, US Navy, US Air Force, and US Coast Guard. All services participate in the sling load certification program begun by the Army in 1984. These manuals include standardized rigging procedures and other information from that program. Efforts were made to standardize ground crew and hookup procedures and terminology. The terms helicopter and aircraft refer to vertical lift aircraft that participate in sling load operations. Where service-unique requirements apply to an entire chapter or body of text, the service initials are at the beginning of the chapter or text. Otherwise the initials are at the end of the applicable sentence. The information in this manual will familiarize personnel with the sling sets, cargo nets, and other sling load equipment in the DOD inventory. It will also acquaint them with the helicopters used for sling load and provide basic procedures for rigging and hooking up loads. Rigging equipment and procedures described in this manual may not be authorized for all aircraft or services because of equipment or service restrictions. This manual does not provide details on aviation operations nor does it present detailed data that is normally contained in unit standing operating procedures (SOPs). air assault phase 2 study guide: Command Of The Air General Giulio Douhet, 2014-08-15 In the pantheon of air power spokesmen, Giulio Douhet holds center stage. His writings, more often cited than perhaps actually read, appear as excerpts and aphorisms in the writings of numerous other air power spokesmen, advocates-and critics. Though a highly controversial figure, the very controversy that surrounds him offers to us a testimonial of the value and depth of his work, and the need for airmen today to become familiar with his thought. The progressive development of air power to the point where, today, it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest In fact, in many ways, the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision. Douhet, together with Hugh

“Boom” Trenchard of Great Britain and William “Billy” Mitchell of the United States, is justly recognized as one of the three great spokesmen of the early air power era. This reprint is offered in the spirit of continuing the dialogue that Douhet himself so perceptively began with the first edition of this book, published in 1921. Readers may well find much that they disagree with in this book, but also much that is of enduring value. The vital necessity of Douhet’s central vision—that command of the air is all important in modern warfare—has been proven throughout the history of wars in this century, from the fighting over the Somme to the air war over Kuwait and Iraq.

air assault phase 2 study guide: The Bloody Battle for Tilly Ken Tout, 2010-05-26 The fierce battle to capture the French village of Tilly-la-Campagne was an exceptionally bloody episode in the story of the allied breakout from Normandy in the summer of 1944. Small Allied infantry units faced an almost impossible mission, hampered by the proximity of the elite German 1st SS Panzer Division and 'friendly fire' from the erratic USAAF bombing raids. If that was not enough, appalling tactical errors by Allied commanders resulted in infantry attacks which were as costly pro rata as the losses suffered on the first day of the Somme. Drawing on vivid eyewitness accounts and the recollections of many who were there in 1944, Ken Tout's masterly portrayal of the bloody battle is a fitting tribute to the British and Canadian youth, who fought, and the many who died, during the breakout from Normandy in the last summer of the war in Europe.

air assault phase 2 study guide: M50 Ontos and M56 Scorpion 1956-70 Kenneth W Estes, 2016-11-17 Designed in the 1950s, the US Marines' M50 Ontos and the US Army's M56 Scorpion were both intended to be fast, light, air-droppable tank-killers for the Cold War battlefield – an answer to the cumbersome and ineffective World War II-vintage tanks that had taken to the battlefield during the Korean War. Although they shared the aim of bringing light, mobile and lethal antitank firepower to the infantry the two vehicles varied wildly in design to cater for their unique mission demands. They first saw service in the Lebanon intervention of 1958 but it was in the Vietnam War that they made their name, with the M50 Ontos seeing intense combat action in the Battle of Hue in 1968. Detailed illustrations and expert analysis provide the reader with a comprehensive history of these deadly antitank vehicles, from early development through to their combat history and the eventual disbandment of the Marine Corps' last antitank battalion with M50A1s in 1971.
